

Tactic Language

Syntax

```
tacexpr ::= tacexpr ; tacexpr
          | tacexpr || tacexpr
          | repeat {tacexpr}
          | try {tacexpr}
          | rule identifier_op: sequent if sequent_list_or_error
          | call identifier
          | without formula { tacexpr }
          | where clause_list { tacexpr }
          | idtac [ message_token ]
          | fail [ message_token ]
          | contradiction tacexpr

sequent_list_or_error ::= sequent_list
                          | error [ message_token ]
```

Semantics

Γ - a goal
 Γs - a set of goals
 F - a fail
 Fs - a set of fails
 E - an error
 Es a set of errors
 Wi - a set of without formulae
 Wh - a set of where clauses

SEQUENCE

$$\begin{array}{c}
